

## Drinking water

# DETECT + ALIM - BLUE - RED

DETECT + ALIM 50 ml has been specially designed for tracing and detecting leaks in drinking water systems and sensitive environments.

This line of tracers is available in BLUE and RED versions in 50 ml syringes and 500 ml spray bottles. It is the perfect fit for plumbers and piping professionals, property surveyors and inspectors, leak detection specialists, swimming pool technicians and legal and building experts – as well as any private individuals wanting to carry out their own investigations.

Note: this tracer is not fluorescent in UV light or black light

### Applications

- Leak detection in domestic and industrial drinking-water systems
- Detecting pool and pond leaks
- Leakage search and tightness tests on storage tanks
- Inspecting leaks on civil engineering projects: dam, dikes and water tanks
- Tightness tests on surfaces, connections and welding in food and sensitive environments
- Sewerage tests on sanitation, rainwater and industrial water networks
- Simulation of pollutant discharge
- Coloured hydrological tracing in natural environments: canals, dikes, ponds, etc.
- Inspecting hydraulic connections between the natural environment and buildings

### Strengths

- Food quality for tracing drinking water and in sensitive environments
- Available in super-concentrated 50 ml syringe format (dyes over 2000 l of water)
- Available in 500 ml spray bottles specially designed for surface tightness testing
- Clean and precise handling
- Non-polluting, non-toxic and biodegradable
